

Countertop Heating Technology

Add the luxury of heated countertops to your home

Add comfort and warmth to your most commonly used surfaces in your home by adding a heated surface solution. Heating technology eliminates the cold touch of stone and creates a soothing, pleasant feel. Although stone surfaces are beautiful and luxurious, they often can feel cool to the touch. Our surface heating technology raises the temperature and takes the chilly edge off of stone surfaces, allowing you to cozy up. The ultra slim profile of the heater makes them virtually invisible, discreetly adding a new level of luxuriant comfort to your home or business.

Lakeside Surfaces' skilled team can apply our heated surface technology beneath the stone during the fabrication process, which allows you the flexibility to choose exactly where you want the surface to be heated. This technology is not confined to just countertops - add the comfort of warmth to any stone surface in your home!

Add surfaces heating to:

- Countertops (overhangs on kitchen islands, peninsulas, bars, and even desks)
- Bath tub surrounds
- Shower seats
- Window seats
- Sink edges
- Breakfast nooks
- Food warming / staging areas

Features & Benefits

- Heats surfaces 20° - 25° F above room temperature
- Customized to your countertop design
- No electrical wiring involved
- Safe, low voltage system
- Costs only pennies per day to operate
- Can be added to both new and existing surfaces
- Programmable heat timer available
- Adjustable temperature controls
