

Quartz is designed to be a very low maintenance and durable surface that is not easily damaged, keep yours looking new by following the care & maintenance instructions below.

**DAILY CLEANING:**

As needed, simply wipe down your quartz surfaces with a damp cloth and dry completely to avoid water spots.

**STUBBORN SPOTS:**

While quartz is non-porous and will not stain, sometimes stubborn spots can linger longer than you would like, especially with white and lighter colors. In order to get rid of these spots, use a soft cloth, sponge and a non-abrasive cleaner, such as Pristine Clean. Apply cleaner to cloth or sponge, not directly to your quartz surface, and wipe the surface. Repeat until you have removed the spot. Thoroughly rinse the surface and wipe dry to prevent water spots.

**GREASE SPOTS:**

Wipe grease spots with isopropyl (rubbing) alcohol and wipe the spot. Repeat as necessary until desired results have been achieved. Always follow with cleaning using mild soap or detergent as outlined above, then thoroughly rinse with cool water and dry with a soft cloth or paper towel.

**RECOMMENDED CLEANING PRODUCTS:**

While we highly recommend our **Pristine Clean™** which has been specially formulated to be tough on germs and grim, there are a variety of other products that are safe to use on your quartz tops.

*Please avoid selecting a variation of the products listed below, as not all products are created the same and certain variations may include harmful chemicals or additives that could damage your quartz.*

### DO NOT USE:

NEVER USE any of the following to clean your quartz counter. The list below is intended to be illustrative, not comprehensive. If a cleaning agent, tool or technique is not explicitly suggested in the cleaning methods section above, it is NOT recommended for your quartz counter.

- Abrasive cleaning pads such as Scotch-Brite or the equivalent (any color).
- Magic Erasers or equivalent melamine sponges.
- Steel wool, SOS, Brillo, etc.
- High-acid cleaners such as tub & tile cleaner, mold remover, rust & hard water stain removers, toilet bowl cleaner, drain cleaner, etc.
- Powdered oxalic acid (e.g. Bar Keeper's Friend)
- Alkaline cleaners such as bleach, ammonia, oven cleaner, etc.
- Oil soaps.
